

# Natural Stone

## ABOUT NATURAL STONE

Marble is ideal for uses where the material's aesthetic and technical qualities are of vital importance. 100% of the marble and natural stone material used in Maark products are reclaimed. We handpick each individual piece from stonemason offcut's and turn them into fine pieces which compliment our bathroom furniture.

## EVERYDAY CLEANING + MAINTENANCE

### No Scourers or Abrasive Cleaners

Under no circumstances should you use abrasive cloths or abrasive cleaners, similar to Jif or Gumption. Abrasive materials and solutions will scratch the surface and void the warranty. Abrasive materials include, but are not limited to, scouring pads, steel wool and brushes. Always use a soft sponge or cloth.

### Cleaning Procedure

Regularly wipe natural stone with warm water using a soft detergent free sponge or cloth.

### Avoid Harsh Chemicals

The sealer does not protect against acid attack. Avoid direct contact with harsh chemicals, bleach, abrasive and high-acidity products and nail polish remover. Using these may damage the product over time and void the warranty. If any of these come into contact with the surface, rinse immediately with water and follow the normal cleaning procedure. To keep the natural stone looking good, clean it regularly with warm soapy water or a pH neutral cleaner.

### Sealer

Although stone products are sealed to reduce risk of staining, it won't completely protect against liquid penetration, scratches, acidic substances or prolonged moisture. The surface of natural stone will develop a patina over time and will change appearance depending on how it's used.

### Avoid Prolonged Moisture

Avoid leaving moist or wet products directly on surface for an extended period. This includes soap dispensers and toothbrushes. Rinse thoroughly and dry after cleaning.

## WARRANTY

A comprehensive statement of warranty is provided on our website.

Each Maark piece is hand-made by our craftspeople, therefore has natural variations. We aim to represent these characteristics throughout Maark's marketing collateral. These natural qualities have no impact on the performance of the product. We suggest obtaining material swatches or viewing the product in person to ensure it meets your expectations.
